Re: Monterey Peninsula Water Supply Project (MPWSP)

Dear Commissioners and Agency Officials:

I request the CPUC deny approval of the draft Environmental Impact Report (DEIR) and deny certification for the Monterey Peninsula Water Supply Project (MPWSP) until at least two very specific issues are clarified:

- There have been NO successful, completed slant wells for subsurface ocean desalination anywhere in the U.S. or the world. There was only one attempted project at Dana Point, CA. State agencies require a feasibility study of this new technology. With an untested and experimental design, the *highest standard* of scientific testing must be made. There is a more accurate method of mapping the saltwater intrusion in the Salinas Valley Groundwater Basin (called Electrical Resistivity Tomography-ERT) but this method is NOT used in the DEIR environmental review of impacts. ERT imaging will be completed in mid-2017. Such scientific data and observations must be included in the DEIR evaluation of impacts and the question of 'no harm' from the project.
- Cal-Am has no water rights in the Salinas Groundwater Basin but they intend to pump another water district's groundwater. The fundamental determination of legal water rights must be made now before further infrastructure investment and before more project approvals.
- Additional comments:

Thank you for your attention to this matter:

Sincerely,  Ph.D.

Re: Monterey Peninsula Water Supply Project (MPWSP)

Dear Commissioners and Agency Officials:

I request the CPUC deny approval of the draft Environmental Impact Report (DEIR) and deny certification for the Monterey Peninsula Water Supply Project (MPWSP) until at least two very specific issues are clarified:

- There have been NO successful, completed slant wells for subsurface ocean desalination anywhere in the U.S. or the world. There was only one attempted project at Dana Point, CA. State agencies require a feasibility study of this new technology. With an untested and experimental design, the *highest standard* of scientific testing must be made. There is a more accurate method of mapping the saltwater intrusion in the Salinas Valley Groundwater Basin (called Electrical Resistivity Tomography-ERT) but this method is NOT used in the DEIR environmental review of impacts. ERT imaging will be completed in mid-2017. Such scientific data and observations must be included in the DEIR evaluation of impacts and the question of 'no harm' from the project.
- Cal-Am has no water rights in the Salinas Groundwater Basin but they intend to pump another water district's groundwater. The fundamental determination of legal water rights must be made now before further infrastructure investment and before more project approvals.
- Additional comments:

Thank you for your attention to this matter.

Sincerely,

(Signature) Bill Brarney

State agencies require a feasibility study of this new technology. With an untested and experimental design, the *highest standard* of scientific testing must be made. There is a more accurate method of mapping the saltwater intrusion in the Salinas Valley Groundwater Basin (called Electrical Resistivity Tomography-ERT) but this method is NOT used in the DEIR environmental review of impacts. ERT imaging will be completed in mid-2017. Such scientific data and observations must be included in the DEIR evaluation of impacts and the question of 'no harm' from the project.
- Cal-Am has no water rights in the Salinas Groundwater Basin but they intend to pump another water district's groundwater. The fundamental determination of legal water rights must be made now before further infrastructure investment and before more project approvals.
- Additional comments:

Thank you for your attention to this matter.

Re: Monterey Peninsula Water Supply Project (MPWSP)

Dear Commissioners and Agency Officials:

I request the CPUC deny approval of the draft Environmental Impact Report (DEIR) and deny certification for the Monterey Peninsula Water Supply Project (MPWSP) until at least two very specific issues are clarified:

- There have been NO successful, completed slant wells for subsurface ocean desalination anywhere in the U.S. or the world. There was only one attempted project at Dana Point, CA. State agencies require a feasibility study of this new technology. With an untested and experimental design, the *highest standard* of scientific testing must be made. There is a more accurate method of mapping the saltwater intrusion in the Salinas Valley Groundwater Basin (called Electrical Resistivity Tomography-ERT) but this method is NOT used in the DEIR environmental review of impacts. ERT imaging will be completed in mid-2017. Such scientific data and observations must be included in the DEIR evaluation of impacts and the question of 'no harm' from the project.

Re: Monterey Peninsula Water Supply Project (MPWSP)

Dear Commissioners and Agency Officials:

I request the CPUC deny approval of the draft Environmental Impact Report (DEIR) and deny certification for the Monterey Peninsula Water Supply Project (MPWSP) until at least two very specific issues are clarified:

- There have been NO successful, completed slant wells for subsurface ocean desalination anywhere in the U.S. or the world. There was only one attempted project at Dana Point, CA. State agencies require a feasibility study of this new technology. With an untested and experimental design, the *highest standard* of scientific testing must be made. There is a more accurate method of mapping the saltwater intrusion in the Salinas Valley Groundwater Basin (called Electrical Resistivity Tomography-ERT) but this method is NOT used in the DEIR environmental review of impacts. ERT imaging will be completed in mid-2017. Such scientific data and observations must be included in the DEIR evaluation of impacts and the question of 'no harm' from the project.
- Cal-Am has no water rights in the Salinas Groundwater Basin but they intend to pump another water district's groundwater. The fundamental determination of legal water rights must be made now before further infrastructure investment and before more project approvals.
- Additional comments:

Thank you for your attention to this matter.

Re: Monterey Peninsula Water Supply Project (MPWSP)

Dear Commissioners and Agency Officials:

I request the CPUC deny approval of the draft Environmental Impact Report (DEIR) and deny certification for the Monterey Peninsula Water Supply Project (MPWSP) until at least two very specific issues are clarified:

- There have been NO successful, completed slant wells for subsurface ocean desalination anywhere in the U.S. or the world. There was only one attempted project at Dana Point, CA. State agencies require a feasibility study of this new technology. With an untested and experimental design, the *highest standard* of scientific testing must be made. There is a more accurate method of mapping the saltwater intrusion in the Salinas Valley Groundwater Basin (called Electrical Resistivity Tomography-ERT) but this method is NOT used in the DEIR environmental review of impacts. ERT imaging will be completed in mid-2017. Such scientific data and observations must be included in the DEIR evaluation of impacts and the question of 'no harm' from the project.
- Cal-Am has no water rights in the Salinas Groundwater Basin but they intend to pump another water district's groundwater. The fundamental determination of legal water rights must be made now before further infrastructure investment and before more project approvals.
- Additional comments:

Thank you for your attention to this matter.

Sincerely, Bernice H Swartley

I request the CPUC deny approval of the draft Environmental Impact Report (DEIR) and deny certification for the Monterey Peninsula Water Supply Project (MPWSP) until at least two very specific issues are clarified:

- There have been NO successful, completed slant wells for subsurface ocean desalination anywhere in the U.S. or the world. There was only one attempted project at Dana Point, CA. State agencies require a feasibility study of this new technology. With an untested and experimental design, the *highest standard* of scientific testing must be made. There is a more accurate method of mapping the saltwater intrusion in the Salinas Valley Groundwater Basin (called Electrical Resistivity Tomography-ERT) but this method is NOT used in the DEIR environmental review of impacts. ERT imaging will be completed in mid-2017. Such scientific data and observations must be included in the DEIR evaluation of impacts and the question of 'no harm' from the project.
-
- Cal-Am has no water rights in the Salinas Groundwater Basin but they intend to pump another water district's groundwater. The fundamental determination of legal water rights must be made now before further infrastructure investment and before more project approvals.
-
- Additional comments:

Thank you for your attention to this matter.

Sincerely,

(Signature) Allan Canepa

State agencies require a feasibility study of this new technology. With an untested and experimental design, the *highest standard* of scientific testing must be made. There is a more accurate method of mapping the saltwater intrusion in the Salinas Valley Groundwater Basin (called Electrical Resistivity Tomography-ERT) but this method is NOT used in the DEIR environmental review of impacts. ERT imaging will be completed in mid-2017. Such scientific data and observations must be included in the DEIR evaluation of impacts and the question of 'no harm' from the project.
- Cal-Am has no water rights in the Salinas Groundwater Basin but they intend to pump another water district's groundwater. The fundamental determination of legal water rights must be made now before further infrastructure investment and before more project approvals.
- Additional comments:

Thank you for your attention to this matter.

Sincerely,

(Signature) Ruth C. Stephan

Re: Monterey Peninsula Water Supply Project (MPWSP)

Dear Commissioners and Agency Officials:

I request the CPUC deny approval of the draft Environmental Impact Report (DEIR) and deny certification for the Monterey Peninsula Water Supply Project (MPWSP) until at least two very specific issues are clarified:

- There have been NO successful, completed slant wells for subsurface ocean desalination anywhere in the U.S. or the world. There was only one attempted project at Dana Point, CA. State agencies require a feasibility study of this new technology. With an untested and experimental design, the *highest standard* of scientific testing must be made. There is a more accurate method of mapping the saltwater intrusion in the Salinas Valley Groundwater Basin (called Electrical Resistivity Tomography-ERT) but this method is NOT used in the DEIR environmental review of impacts. ERT imaging will be completed in mid-2017. Such scientific data and observations must be included in the DEIR evaluation of impacts and the question of 'no harm' from the project.

Re: Monterey Peninsula Water Supply Project (MPWSP)

Dear Commissioners and Agency Officials:

I request the CPUC deny approval of the draft Environmental Impact Report (DEIR) and deny certification for the Monterey Peninsula Water Supply Project (MPWSP) until at least two very specific issues are clarified:

- There have been NO successful, completed slant wells for subsurface ocean desalination anywhere in the U.S. or the world. There was only one attempted project at Dana Point, CA. State agencies require a feasibility study of this new technology. With an untested and experimental design, the *highest standard* of scientific testing must be made. There is a more accurate method of mapping the saltwater intrusion in the Salinas Valley Groundwater Basin (called Electrical Resistivity Tomography-ERT) but this method is NOT used in the DEIR environmental review of impacts. ERT imaging will be completed in mid-2017. Such scientific data and observations must be included in the DEIR evaluation of impacts and the question of 'no harm' from the project.
- Cal-Am has no water rights in the Salinas Groundwater Basin but they intend to pump another water district's groundwater. The fundamental determination of legal water rights must be made now before further infrastructure investment and before more project approvals.
- Additional comments:

Thank you for your attention to this matter.

Sincerely,

(Signature)

Re: Monterey Peninsula Water Supply Project (MPWSP)

Dear Commissioners and Agency Officials:

I request the CPUC deny approval of the draft Environmental Impact Report (DEIR) and deny certification for the Monterey Peninsula Water Supply Project (MPWSP) until at least two very specific issues are clarified:

- There have been NO successful, completed slant wells for subsurface ocean desalination anywhere in the U.S. or the world. There was only one attempted project at Dana Point, CA. State agencies require a feasibility study of this new technology. With an untested and experimental design, the *highest standard* of scientific testing must be made. There is a more accurate method of mapping the saltwater intrusion in the Salinas Valley Groundwater Basin (called Electrical Resistivity Tomography-ERT) but this method is NOT used in the DEIR environmental review of impacts. ERT imaging will be completed in mid-2017. Such scientific data and observations must be included in the DEIR evaluation of impacts and the question of 'no harm' from the project.
- Cal-Am has no water rights in the Salinas Groundwater Basin but they intend to pump another water district's groundwater. The fundamental determination of legal water rights must be made now before further infrastructure investment and before more project approvals.
- Additional comments:

Thank you for your attention to this matter.

Sincerely,

(Signature)

- There have been NO successful, completed slant wells for subsurface ocean desalination anywhere in the U.S. or the world. There was only one attempted project at Dana Point, CA. State agencies require a feasibility study of this new technology. With an untested and experimental design, the *highest standard* of scientific testing must be made. There is a more accurate method of mapping the saltwater intrusion in the Salinas Valley Groundwater Basin (called Electrical Resistivity Tomography-ERT) but this method is NOT used in the DEIR environmental review of impacts. ERT imaging will be completed in mid-2017. Such scientific data and observations must be included in the DEIR evaluation of impacts and the question of 'no harm' from the project.
- Cal-Am has no water rights in the Salinas Groundwater Basin but they intend to pump another water district's groundwater. The fundamental determination of legal water rights must be made now before further infrastructure investment and before more project approvals.
- Additional comments:

Thank you for your attention to this matter.

Sincerely,

(Signature)

Re: Monterey Peninsula Water Supply Project (MPWSP)

Dear Commissioners and Agency Officials:

I request the CPUC deny approval of the draft Environmental Impact Report (DEIR) and deny certification for the Monterey Peninsula Water Supply Project (MPWSP) until at least two very specific issues are clarified:

- There have been NO successful, completed slant wells for subsurface ocean desalination anywhere in the U.S. or the world. There was only one attempted project at Dana Point, CA. State agencies require a feasibility study of this new technology. With an untested and experimental design, the *highest standard* of scientific testing must be made. There is a more accurate method of mapping the saltwater intrusion in the Salinas Valley Groundwater Basin (called Electrical Resistivity Tomography-ERT) but this method is NOT used in the DEIR environmental review of impacts. ERT imaging will be completed in mid-2017. Such scientific data and observations must be included in the DEIR evaluation of impacts and the question of 'no harm' from the project.
- Cal-Am has no water rights in the Salinas Groundwater Basin but they intend to pump another water district's groundwater. The fundamental determination of legal water rights must be made now before further infrastructure investment and before more project approvals.
